DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30, drawn to a system, a method, and a computer-readable storage medium holding code for diagnosing and monitoring respiratory insufficiency for automated remote patient care, comprising: a server retrieving and processing a plurality of monitoring sets including a comparison module determining a patient status change by comparing at least one recorded measure from each of the monitoring sets to at least one other recorded measure with both recorded measures relating to a same type of patient information, classified in class 600, subclass 529.
- II. Claims 31-74, drawn to a system, a method, and a computer-readable storage medium holding code for diagnosing and monitoring respiratory insufficiency for automated remote patient care, comprising: a server diagnosing a respiratory insufficiency finding; and a set of stored indicator thresholds, each indicator threshold corresponding to a quantifiable physiological measure of a pathophysiology indicative of respiratory insufficiency and relating to a same type of patient information as at least one of the recorded measures, classified in class 600, subclass 529.
- III. Claims 75-81, drawn to a system, a method, and a computer-readable storage medium holding code for diagnosing and monitoring respiratory

insufficiency for automated remote patient care, comprising: a medical device regularly recording measures relating to at least one of monitoring reduced exercise capacity and respiratory distress; and a server evaluating at least one of respiratory insufficiency onset, progression, regression, and status quo, classified in class 600, subclass 529.

The inventions are distinct, each from the other because of the following reasons:

Inventions Groups I-III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination Group I has separate utility such as retrieving and processing a plurality of monitoring sets, whereas Group II diagnose respiratory insufficiency finding and Group III evaluates at least one respiratory insufficiency onset, progression, regression, and status quo. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

A telephone call was made to Patrick J.S. Inouye on August 28, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Navin Natnithithadha whose telephone number is (571) 272-4732. The examiner can normally be reached on Monday-Friday, 8:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor, II can be reached on (571) 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
